duction to and overview of offshore pipelay operations which is suited for control researchers. The paper also looks at the possibility of automating such operations beyond the manual DP-based control procedures of today since it seems plausible that control systems can be used to further improve the performance

### **OFFSHORE PIPELAY OPERATIONS FROM A CONTROL PERSPECTIVE**

Dynamic analysis of an offshore pipe laying operation using the reel method 3 The response of a vessel to the ocean waves can be calculated by the application of ship theory and several simulation tools are used, for example WAMIT, VERES [8,9]. Both regular and irregular wave theories are in use, however

to 2,000t. In addition, we can supply pipelay mooring winches for pipelay operations. These high-occupancy winches are integrated into the vessel and pipelay control systems. Optimum energy efficiency is achieved through the re-use of power generated during pipelay operations as this power can be used to operate pipelay mooring winches.

Sampson is a proven offshore/subsea construction vessel. This multi-functional vessel is equipped with Class 3 dynamic positioning and a full-field development spread including a 1600mt heavy lift slewing crane, S-lay pipelay spread and a 200mt subsea active-heave compensated crane with 2000m water-depth capacity. The

### **SAMPSON**

The initial vessel orientation is defined by the initial yaw angle,  $\theta$ . It is assumed that the local heave axis is vertical in the vessel undisplaced position, so the initial orientation of the vessel axes is completely defined by the angle  $\theta$  (which is measured anti-clockwise from the global Y-axis) as shown in the figure below. Units: [deg] Trim
