For the pediatric body CTDI measurement, if a site's clinical protocol dictates the use of the 32 cm phantom with a Scan Field of View (SFOV) that limits the Display Field of View (DFOV) such that the entire phantom is not visualized, is that acceptable?

CT Accreditation FAQ

ACR Phantom Processing. CT Linearity – similar to the method described for the standard processing using 5 materials; Slice thickness – is determined from the CT number profile of the 2 pairs of angled series of wires visible in 0.5 mm z-axis increments.; Laser Alignment – is verified using the central wire in the slice width ramps and determining the location relative to the other wires ...

1. Introduction. Accurate information about the geometry and topology of a patient's vasculature is crucial for many medical applications. In patients with suspected coronary artery disease, information about the cardiac vasculature may be obtained non-invasively using a cardiac CT angiography (CCTA) scan (Leipsic et al., 2014). A typical first step in the analysis of CCTA scans is the ...

In scientific visualization and computer graphics, volume rendering is a set of techniques used to display a 2D projection of a 3D discretely sampled data set, typically a 3D scalar field.. A typical 3D data set is a group of 2D slice images acquired by a CT, MRI, or MicroCT scanner. Usually these are acquired in a regular pattern (e.g., one slice every millimeter) and usually have a regular ...

DICOM is a standard developed by American College of Radiology (ACR) and National Electrical Manufacturers Association (NEMA).. In the beginning of the 1980s, it was very difficult for anyone other than manufacturers of computed tomography or magnetic resonance imaging devices to decode the images that the machines generated. Radiologists and medical physicists wanted to use the images for ...
