Rock Slope Engineering was published in three editions (1974, 1977 and 1981) by the Institute of Mining and Metallurgy in London. The original research for the book at the University of London was sponsored by the mining industry in response to a need to develop design methods for increasingly deep open pits.

Rock Slope Engineering

Due to the dip of the rock joints toward the historic wall, slope stability analyses were conducted to evaluate the effect of the proposed loads on the slope (rock/soil). Rock slope stability analyses revealed that the rock would fail due to the stress imposed by shallow foundations, and thus cause the historic retaining wall to collapse.
