Project description: This project is an opportunity to learn about the structure and design of an internal combustion engine. This is a display project and you will not have to define variables or come up with a hypothesis. You may make models and do drawings to explain the actions and parts of an engine.

Building a "Rocker" Engine This little engine project is just for fun, and a great little project for the hobby machine shop. The engine runs on air, and doesn't really "do" anything, but it's fun to watch. You'll be surprised how many grown men will just stand around a look at a tiny running engine.

An Internal Combustion Engine (IC Engine) is a type of combustion engine that converts chemical energy into thermal energy, to produce useful mechanical work. In an IC engine, combustion chamber is an integral part of the working fluid circuit.. Principle of operation: Air-fuel mixture in the combustion chamber (inside the cylinder) is ignited, either by a spark plug (in case of Spark Ignition ...

Performance Evaluation of EGR in Two Stroke I.C. Engine Petrol engines are known for their simplicity, low cost and maintenance. However nowadays use of two stroke petrol engines are fading away from the market. An attempt has been made here to revive the use of these old engines by using Exhaust Gas Recirculation (EGR) to improve performances.
