Herein lies the problem with some "O" ring setups. The popular 718cc and 782cc Sea Doo engines use only "O" rings for head sealing. However the cast components of those engines are not nearly as large as the 951's, and so subject to considerably less sealing surface "movement", compared to the 951 top end.

787 & 947 Counterbalance Oil Check. The 787 and 947 engines have a counterbalance oil reservoir that the oem Sea Doo manual says needs to be checked every 50 hours. The 787 though has what I consider a poor design since there is no seal between the crank main bearing next to the cylinder and the crank counterbalance gear.
