Today's spark plugs use resistors to eliminate radio frequency interference (RFI) which can affect on-board computer systems, AM and FM radio reception, TV broadcasts and even airplane communications. Each time the spark jumps across a gap, an electromagnetic field is created that can interfere with radio signals. By placing a resistor in the spark plug, we can substantially reduce RFI.

I recommend against the use any anti-seize lubricant on spark plug threads. I install them "dry" and clean. Neither Honda nor NGK recommends anti-seize because it affects torque values. Also, NGK plugs (and many other brands as well) have a special trivalent plating on the threads for corrosion resistance and also to act as a "release agent" during plug removal.
