This animation shows the reaction that takes place between solutions of sodium chloride and silver nitrate. Not all mixtures of ions produce a precipitation reaction. For example, if we mix together a solution of sodium chloride (NaCl) and a solution of potassium iodide (KI), no precipitation will occur. All ions will stay in the solution.

Chemistry: Lab – Ions in Aqueous Solution Introduction: Many ionic solids dissolve in water to form clear, aqueous solutions that conduct electricity. It is the ions that conduct the electric current. These solutions contain both positive ions (cations) and negative ions (anions) in such a ratio that the net electric charge of the solution is zero.

Ions in Aqueous Solution Lab - teachnlearnchem.com

Precipitation reactions occur when cations and anions in aqueous solution combine to form an insoluble ionic solid called a precipitate. Whether or not such a reaction occurs can be determined by using the solubility rules for common ionic solids.

Reactions in Aqueous Solutions Flashcards | Quizlet

The silver nitrate solution contains $\text{Ag}^+(\text{aq})$ and $\text{NO}_3^-(\text{aq})$. The sodium chloride contains $\text{Na}^+(\text{aq})$ and $\text{Cl}^-(\text{aq})$. Possible new combinations of these ions are AgCl and NaNO_3 . Note: these formulas would have been written in the upper right hand corner of each box before beginning the lab.

Discussion of Theory. Before the compounds dissolve and the ions separate, the equation is called
the molecular equation. When the ions disassociate is when the ions turn into a 'soup' and the
complete ionic equation can be found by splitting up all aqueous solutions in a reaction. The
precipitate is found by using the solubility rules,...
