Computer software, or simply software, is a collection of data or computer instructions that tell the computer how to work. This is in contrast to physical hardware, from which the system is built and actually performs the work. In computer science and software engineering, computer software is all information processed by computer systems, programs and data.

But as more and more changes, modifications, tweaks and supposed optimizations were performed under growing time and budget pressure, things got nasty. The maintainers piled up so called technical debt (we software folks call it quick-hacks, quick-and-dirty-fixes, detours or abbreviations). We're quite sure you know what we're talking about - we experienced it over and over again, it seems ...
