Jump to navigation Jump to search. Protein engineering is the process of developing useful or valuable proteins. It is a young discipline, with much research taking place into the understanding of protein folding and recognition for protein design principles. It is also a product and services market, with an estimated value of \$168 billion by 2017.

The protein engineering techniques described to this point require knowledge of protein structure plus detailed knowledge of active-site function. Very few enzymes have been studied this intensively. Directed evolution is a powerful technique to alter the function of an enzyme without the need for exhaustive structural and functional data (Fig. 11.6).
