Your engine water pump is commonly a simple centrifugal pump driven by a belt connected to the crankshaft of the engine. The pump circulates coolant while the engine is running. The fluid leaving the pump flows through the engine block and cylinder head before entering the radiator and finally returning back to the pump.

If you are finding puddles of water under your car the water pump gasket may be going. Water pump gaskets assist in sealing the water pump to the engine block. These gaskets work under extreme heat and pressure. They should be inspected for drying out and leaking when inspecting the cooling system.
