*Retrosynthesis Practice Problems With Solutions - Eventually, you will unconditionally discover a extra experience and capability by spending more cash. still when? get you put up with that you require to get those every needs past having significantly cash? Why don't you try to acquire something basic in the beginning? That's something that will guide you to understand even more with reference to the globe, experience, some places, like history, amusement, and a lot more?*

*It is your unconditionally own epoch to do its stuff reviewing habit. in the course of guides you could enjoy now is retrosynthesis practice problems with solutions below.*

Answers to Practice Problems December 4, 2000 1) Propose sequences of reactions that could accomplish each of the following transformations. This type of question is one that we have not really addressed in class because we need to have a large repertoire of reactions to make it work. You should go over these carefully,

Give the retrosynthetic analysis for the following three compounds. Pay special attention to the relationship between the functional groups.  $CO_2H$   $CO_2H$   $CO_2H$  Answers: The first is the easiest; it is an  $\alpha,\beta$ -unsaturated compound so we are looking at either aldol condensation or a simple Wittig reaction.

Now consider this retrosynthesis problem: The only solution is to first start with a halogen in the desired ipso position, as it is an ortho-, para-director and will allow you to add the NO<sub>2</sub> electron-withdrawing groups, after which you can swap out the Cl for the CN: Note that the larger halogens Br and I don't participate as well in this ...
