There are three books that are usually used for a first graduate course in analysis, including measure theory, namely Rudin's Real and Complex Analysis, Folland's Real Analysis, and Royden's book. Of the three, I would say Royden's book is the easiest, both in terms of the exposition, material, and exercises.

This, together with Rudin's "Real Analysis", is one of the standard texts on the subject. I personally like Royden a little more -- it has a slightly more conversational tone (but not overly so), and it covers more functional analysis than Rudin does.

After I took my Math 441 & 442 on Real Analysis based on the book Royden(1988) in University of Illinois at Urbana-Champaign, there is some thing fuzzy about the theory. I am confident that the results are correct, but the arbitrary assignment of  $0 \times \infty = 0$  hangs like a dark cloud in the horizon; and the lack of Change of Variable Theorem in the ...
