The Atkinson-cycle engine is a type of single stroke internal combustion engine invented by James Atkinson in 1882. The Atkinson cycle is designed to provide efficiency at the expense of power density, and is used in some modern hybrid electric applications.. The original Atkinson-cycle piston engine allowed the intake, compression, power, and exhaust strokes of the four-stroke cycle to occur ...

Say the good ship Polaris has a mass of 181,000 kilograms (181 metric tons). It has super powerful Nuclear Salt Water Rockets with an exhaust velocity of 182,000 meters per second (because it is using 22% enriched uranium) and a remass flow of 71 kilograms per second. If the Polaris is floating in space with a speed of zero, how fast will it be moving if it burns its engine for ten seconds?

Of course, it was not only journalists who raised questions about American society. One of the most popular novels of the nineteenth century, Edward Bellamy's 1888 Looking Backward, was a national sensation. In it, a man falls asleep in Boston in 1887 and awakens in 2000 to find society radically altered.

In the iron industry, Pennsylvania's furnaces and rolling mills were fast supplanting small local forges. In 1804, Oliver Evans of Philadelphia developed a high-pressure steam engine that was adaptable to a great variety of industrial purposes. Within a few years it powered ships, sawmills, flour mills, printing presses as well as textile factories.
