MANUAL ENGINE 1/2KD-FTV TOYOTA SISTEMA COMMON RAIL

Water pumps wear out through age, through lack of lubrication on older types — which need greasing — or because the drive belt is too tight.. A worn pump may leak around the spindle, in which case there are leak trails down the front of the engine and a slow loss of coolant.. The pump may also rattle as it turns — do not confuse this noise with the screech of a loose, slipping belt.

Replacing a water pump | How a Car Works

Here's how to remove your car's water pump. Turn off the car engine. Let the engine cool down. The water in the system must be completely cool. Open the valve on the bottom of the radiator and drain the water from the system. Place a pan under the drain to catch the water. Make sure the system is totally drained before proceeding.
