Intro to Stochastic Systems (Spring 16) Lecture 3 3 Random signals and probabilistic systems We have defined stochastic signals¹ in an earlier lecture. A stochastic signal X is a collection $(X(t))_{t \in T}$ of random variables indexed by a time variable $t \in T$. Depending on the structure of the set T , we speak of discrete- or continuous-time signals:

3 Random signals and probabilistic systems - Maxim Raginsky

Probability, Statistics, and Random Signals offers a comprehensive treatment of probability, giving equal treatment to discrete and continuous probability. The topic of statistics is presented as the application of probability to data analysis, not as a cookbook of statistical recipes.
