Transcript of 17.3 The Process of Speciation. Answer: When populations become reproductively isolated, they can evolve into two separate species. Reproductive isolation can develop a variety of ways including the behavioral isolation, geographic isolation, and temporal isolation. Many years ago, a few finches from South America - species M -...

17.3 The Process of Speciation by Kaitlyn Forsberg on Prezi

The accumulation of differences between populations. Speciation. Recall that speciation is the process of forming new species by evolution from preexisting species. Speciation has occurred when the net effects of evolutionary forces result in a population that has unique features and is reproductively isolated.

Chapter 17 Section 3: Population Genetics and Speciation

3F Contributions of scientists; 7B Results of natural selection in speciation, diversity, behavior This section explains how species evolve and describes the process of speciation in the Galápagos Islands. Introduction (page 404) 1. What is speciation? It is the formation of new species. Isolating Mechanisms(pages 404-405) 2.
