Show by an example that the strict inequality can hold in (b). Solution: (a) We have for all  $n \in \mathbb{N}$ ,  $\sup_i |f_n - f| = \inf_i |f_n - f|$  taking limit  $n \rightarrow \infty$ , we have desired equality.

This book works great as a reference (after having learned Real & Complex Analysis), but is a pain in the ass to learn it from. If you are looking for a good first text on Measure theory, I would recommend Eli Stein's book on Measure Theory or Folland's Real Analysis Everything contained in the book is useful, though - there are no throwaway theorems or rehashed proofs of earlier material.

I also really liked Landau's Foundations of Analysis and Shilov's Elementary Real and Complex Analysis (same level as Rudin but Shilov's motivates the concepts very well and goes in-depth to the topology). I do not know if you read the following book: Introduction to Topology and Modern Analysis by George Simmons.
