In mathematics, economics, and computer science, the stable marriage problem (also stable matching problem or SMP) is the problem of finding a stable matching between two equally sized sets of elements given an ordering of preferences for each element. A matching is a mapping from the elements of one set to the elements of the other set. A matching is not stable if:

Stable marriage problem - Wikipedia

As a nurse practitioner, my primary responsibility is to use my problem-solving skills to diagnose illnesses and develop treatment plans. With each patient, I analyze their medical histories, their symptoms, and their potential exposures to different illnesses to determine if we can pin down a diagnosis immediately or to see, alternatively, if we need blood tests.
