A chemical plant is an industrial process plant that manufactures (or otherwise processes) chemicals, usually on a large scale. The general objective of a chemical plant is to create new material wealth via the chemical or biological transformation and or separation of materials. Chemical plants use specialized equipment, units, and technology in the manufacturing process.

In computing, scheduling is the method by which work is assigned to resources that complete the work. The work may be virtual computation elements such as threads, processes or data flows, which are in turn scheduled onto hardware resources such as processors, network links or expansion cards.. A scheduler is what carries out the scheduling activity. Schedulers are often implemented so they ...

Proteases were the third most studied group of enzymes produced by SSF in the recent literature. They were produced from various agro industrial and also from tannery industry wastes, especially by fungi of the genus Aspergillus. Activities higher than 3000 U/g and higher than 50,000 U/g were reported (). Proteases are considered the most significant industrial enzymes, representing around 60% ...

Etching. Etching removes layers of silicon dioxide (SiO 2), metals and polysilicon, as well as resists, according to the desired patterns delineated by the resist. The two major categories of etching are wet and dry chemical. Wet etching is predominantly used and involves solutions containing the etchants (usually an acid mixture) at the desired strengths, which react with the materials to be ...
