Is robotics going statistics? The field of probabilistic robotics. S. Thrun. In the 1970s, most research in robotics presupposed the availability of exact models, of robots and their environments. Little emphasis was placed on sensing and the intrinsic limitations of modeling complex physical phenomena.

Sebastian Thrun's Homepage
Probabilistic robotics is a new and growing area in robotics, concerned with perception and control in the face of uncertainty. Building on the field of mathematical statistics, probabilistic robotics endows robots with a new level of robustness in real-world situations.

In contrast with classical solutions, probabilistic algorithms have weaker re-quirements on the accuracy of robotics sensors allowing to represent the degree of uncertainty of the robot by means of probabilistic distributions. Hence, prob-abilistic algorithms tend to be a more robust solution and

scalable for real-world environments.
